Troubleshooting

General

Can I see where the apps macros are used?

Yes, the easiest way is to use "Macro Usage", which is already available with Confluence.

Macro Usage Documentation

When the plugin is disabled, you should be able to still find usages using CQL:

CQL	Example
macro = "carousel-slider-macro"	https://atlas.moewe.io/dosearchsite.action?cql=macro+%3D+%22carousel-slider-macro%22
macro = "before-after-slider-macro" macro = "before-after-slider-macro-v2"	https://atlas.moewe.io/dosearchsite.action?cql=macro+%3D+%22before-after-slider-macro-v2%22
macro = "image-grid-gallery-macro"	https://atlas.moewe.io/dosearchsite.action?cql=macro+%3D+%22image-grid-gallery-macro%22
macro = "image-column-gallery-macro"	https://atlas.moewe.io/dosearchsite.action?cql=macro+%3D+%22image-column-gallery-macro%22
macro = "accordion-slider-macro"	https://atlas.moewe.io/dosearchsite.action?cql=macro+%3D+%22accordion-slider-macro%22

Before After Image Slider

The image search only shows older images/ doesn't show all images

There may be two reasons for this.

1. You've created a new page and are still within the edit mode. Please do the following then:
    a. Create and save the page
    b. Upload your images
    c. Edit the page and insert the macro
2. When you search for images within the macro editor and don't see your latest uploads, your index is propable not up to date.
    a. Try rebuilding the index: https://confluence.atlassian.com/doc/content-index-administration-148844.html
