

Administration Manual

Collect translations

First you have to enable the collection of available translations.

1. Go to the settings page within your Confluence administration
2. Check the option "Enable to collect translations while users are browsing the site."
3. And save the settings

Add translators

It is possible to set users as translators. These users will be able to edit translations.

1. Go to the settings page within your Confluence administration
2. Insert into the "Translatores" field the user names of your translators
3. (It is recommended enable the checkbox for "Show in menu". If enabled the users will see a link within Confluence cog menu to the translations list.)

Translate

All known translations are shown on the "Translations" section of the settings page.

To translate:

1. (Use the search box to find the translation you want to edit)
2. Click the row, edit your translation, save. That's it.

Search field to filter available translations

Quick view of all available translations for the key. Custom translations are shown in red.

The translation form allows you to edit or add custom translations for all languages installed within Confluence.

When an original string was found, it will be shown beneath the input field.
