Macro paramaters

Label	Parameter	Default	Description	Hosting Type
Sources	sources	Current page	Specify the title of space or page which contains the images or image title you want displayed. You can specify more than one source in autocomplete field.	Server
Labels	labelsFilter		Filters the images to display, based on a list of labels. If you wish to enter more than one label, separate the labels with commas.	Server, Cloud
Number	maxNumber	200	Maximum number of images. <i>Admin can define global max limit for application. Value of global max limit will be used if default or custom value is higher.</i>	Server, Cloud
Sort Images By	sort	name	Specify an attribute to sort the images by. Sort order is ascending, unless you select the Reverse Sort parameter (see below).	Server
Sort	reverse	ascending	Used in combination with the Sort Images By parameter above. Use Reverse Sort to reverse the sort order, from ascending to descending.	Server
Size	itemSize	200	Size of image container in pixel.	Server, Cloud
Vertical gutter	gutterX	15	Size of vertical gutter in pixel.	Server, Cloud
Horizontal gutter	gutterY	15	Size of horizontal gutter in pixel.	Server, Cloud
Animate	animate	Yes	Image positioning will be animated, for instance when the page is resized.	Server, Cloud
Captions	captions	No	Image comment as caption.	Server

The first part of the paper discusses the importance of the research and the objectives of the study. It then proceeds to a literature review, where the existing research on the topic is examined. The methodology section describes the research design, data collection, and analysis. The results section presents the findings of the study, and the conclusion summarizes the main points and offers suggestions for future research.

The study was conducted in a laboratory setting, where participants were asked to perform a series of tasks. The tasks were designed to measure the participants' performance under different conditions. The data was then analyzed using statistical methods to determine the significance of the results.

The results of the study show that there is a significant difference in performance between the two groups. This difference is attributed to the experimental conditions. The findings suggest that the proposed method is more effective than the existing one.

In conclusion, the study has shown that the proposed method is a viable alternative to the existing one. Further research is needed to confirm these findings and to explore the potential applications of the method in other contexts.

The first part of the paper discusses the importance of the research and the objectives of the study. It then presents a literature review of the existing research on the topic. The methodology section describes the research design and the data collection process. The results section presents the findings of the study, and the conclusion section summarizes the main points and provides recommendations for future research.

The study was conducted in a laboratory setting, and the participants were recruited from a local university. The data was collected using a series of questionnaires and interviews. The results of the study show that there is a significant relationship between the variables studied. The findings suggest that the research has practical implications for the field of study.

The research was supported by a grant from the National Science Foundation. The authors would like to thank the participants for their contribution to the study and the reviewers for their helpful comments.

667 x 1000

The first part of the paper discusses the importance of the research and the objectives of the study. It then moves on to a literature review, which provides a background on the topic and identifies the gaps in the existing research. The methodology section describes the research design, data collection, and analysis. The results section presents the findings of the study, and the conclusion summarizes the main points and offers suggestions for future research.

The research was conducted in a systematic and rigorous manner, following the principles of good research practice. The data was collected from a representative sample of the population, and the analysis was carried out using appropriate statistical methods. The results of the study are presented in a clear and concise manner, and the conclusions are based on the evidence gathered.

The findings of the study have important implications for the field of research, and they provide valuable insights into the issues being studied. The research also highlights the need for further investigation in this area, and it offers suggestions for how this can be achieved.

In conclusion, the research has shown that there is a need for further investigation in this area, and it has provided valuable insights into the issues being studied. The findings of the study have important implications for the field of research, and they provide valuable insights into the issues being studied.

The second part of the paper describes the methodology used in the study, including the data collection and analysis techniques. The third part of the paper presents the results of the study, and the fourth part discusses the conclusions and implications of the findings.

The research was conducted using a quantitative approach, and the data was collected from a sample of participants. The results of the study indicate that there is a significant relationship between the variables being studied. The findings suggest that the research has important implications for the field, and further research is needed to explore the topic in more detail.

In conclusion, the study has provided valuable insights into the research topic, and the findings have important implications for the field. The research was conducted using a rigorous methodology, and the results are reliable and valid. The findings suggest that the research has important implications for the field, and further research is needed to explore the topic in more detail.

The first part of the paper discusses the importance of the research and the objectives of the study. It then moves on to a literature review, which provides a background on the topic and identifies the gaps in the existing research. The methodology section describes the research design, data collection, and analysis. The results section presents the findings of the study, and the discussion section interprets these findings in the context of the research objectives. Finally, the conclusion summarizes the main points and suggests areas for future research.

The research was conducted using a quantitative approach, which allowed for the collection of large amounts of data and the use of statistical analysis to identify patterns and trends. The data was collected through a series of surveys and interviews, which were designed to explore the research objectives in depth. The analysis of the data revealed several key findings, which are discussed in detail in the results section. These findings have important implications for the field of study and provide a basis for further research.

The study was limited by several factors, including the sample size and the scope of the research. However, the findings are still valuable and provide a solid foundation for future research. The research also highlights the need for further exploration of the topic and the importance of continued research in this area.

In conclusion, the research has provided valuable insights into the topic and has identified several key findings. These findings have important implications for the field of study and provide a basis for further research. The study also highlights the need for continued research in this area and the importance of exploring the topic in more depth.

667 x 1000

The first part of the paper discusses the importance of the research and the need for a new approach. It then presents the methodology used in the study, followed by the results and conclusions. The final section discusses the implications of the findings and suggests areas for future research.

The research was conducted in a laboratory setting, where the participants were asked to perform a series of tasks. The results of the study show that the new approach is more effective than the traditional one. This is supported by the data collected during the experiment.

The conclusions drawn from the study are that the new approach is a significant improvement over the old one. It is more efficient and easier to use. The implications of this research are far-reaching, as it could be applied to many other areas of study.

Future research should focus on further refining the new approach and testing it in a wider range of contexts. It would also be interesting to see how the new approach performs in real-world situations.

The first part of the paper discusses the importance of the research and the objectives of the study. It then presents a literature review of the existing research on the topic. The second part of the paper describes the methodology used in the study, including the data collection and analysis techniques. The third part of the paper presents the results of the study, and the fourth part discusses the conclusions and implications of the findings. The paper concludes with a summary of the main points and a list of references.

The research was conducted using a quantitative approach, with data collected from a survey of 100 participants. The data was analyzed using statistical software, and the results were presented in a series of tables and graphs. The findings of the study indicate that there is a significant relationship between the variables being studied, and that the results have important implications for the field of research.

The study was limited by a number of factors, including the sample size and the potential for bias. However, the results of the study are consistent with the findings of other research in the field, and the study contributes to the understanding of the topic.

The research was funded by the National Science Foundation, and the results of the study are available to the public. The study was published in the *Journal of Research*, and the findings have been widely cited in the literature.

The study was conducted by a team of researchers, including Dr. John Doe, Dr. Jane Smith, and Dr. Bob Johnson. The study was published in the *Journal of Research*, and the findings have been widely cited in the literature.
