

Translate for Confluence - Documentation

Translate for Confluence gives you the opportunity to translate the user interface of Confluence and add-ons. Overwrite existing translations or add missing translations directly via the translation management of the add-on.

- Automatic collection of available translations by calling up content
- Overwrite existing or provide missing translations
- Add users as translators

The following features are planned:

- Translators for specific languages
- Features for content translation
- Import/export for easy sharing or professional translations
- Translation suggestions
- Automatic scanning of installed add-ons
