

REST API

Content Rating for Confluence provides a comprehensive REST API for retrieving data (eventually all read/write interactions will be available via the REST- API).

You can use the REST API for retrieving and processing data as well.

To get information about available functions:

1. Install the [Atlassian REST API Browser](#)
2. Open the REST API browser: **CONFLUENCE_BASE_URL/plugins/servlet/restbrowser/**
 - a. **Remove** the tick from "Show only public APIs" (wait a while)
 - b. **Search** for "content-rating"
