

Show something after rating clicked using jQuery

You can use jQuery to interact with ratings.

The following code will show a message, when the "heart" icon is clicked. For this we will use the categories ID to find it using jQuery.

```
AJS.toInit(function () {  
    setTimeout(function () {  
        jQuery('.content-rating-icon[data-category-id=2]').click(function () {  
            alert('Thank you.');            return true;  
        })  
    }, 1000);  
})
```
